Identification of

A turbine gas me

certified type

Type: TBQM

Characteristics See page 2 and further

This Certificate attests the conformity of the above identified type (represented by the sample(s) identified in the OIML Type Evaluation Report) with the requirements of the following Recommendation of the International Organization of Legal Metrology (OIML):

R 137-1 (2012) "Gas meters"

Accuracy class

This Certificate relates only to the metrological and technical characteristics of the type of measurin instrument covered by the relevant OIML International Recommendation identified above. This Certificate does not bestow any form of legal international approval.

Important note: Apart from the mention of the Certificate's reference number and the name of the OIML Member State in which the Certificate was issued, partial quotation of the Certificate and of the associated OIML Type Evaluation Report(s) is not permitted, although either may be reproduced in full.

Issuing Authority

NMi Certin B.V., OIML Issuing Authority

23 November 2015

Head Certification Board

NMi Certin B.V. Hugo de Grootplein 1 3314 EG Dordrecht the Netherlands T +31 78 6332332 certin@nmi.nl

This document is issued under the provision that no liability is accepted and that the applicant shall indemnify third-party liability.

The notification of NMi Certin B.V. as Issuing Authority can be verified at www.oiml.org

Parties concerned can lodge objection against this decision, within six weeks after the date of submission, to the general manager of NMi (see www.nmi.nl).

The conformity was established by the results of tests and examinations provided in the associated OIML Type Evaluation Report:

- No. NMi-12200520-02 dated 22 September 2014 that includes 39 pages.

Characteristics of the gas meter:

Table 1 gives the general characteristics of the turbine gas meter. Table 2 up to and including 5 on the following pages specify in detail the characteristics and essential parts of the turbine meters.

The construction of the measuring instrument is recorded in the Documentation folder no. T10488-1.

. <u> </u>

The measuring part consists of a cartridge including all metrological essential parts such as turbine wheel, bearings, shafts, primary gears and inlet flow straighteners. The number of blades, the appertaining angle of the blades and other essential dimensions of the turbine wheel are given below.

+ + + + + + + + + + + + + + + + + + +						
Diameter [mm]	Type (G-value)	Impeller diameter [mm]	Blade height [mm]	Vane thickness [mm]	Blade angle	Number of blades

+ + +	1600	2500	500	+ + + + .	125		83,3
300	2500 4000	4000 6500	800 1300	200 325	+ + + +	133,3 216,7	+ + + +

Remarks regarding table 4:

- The application of permanently lubricated bearings limits the maximum operating pressure to 16 bar(g), see also table 3.
- MR = measuring range (Q_{max}/Q_{min} = 1:20 or 1:30).

The measured volume is presented by means of a conventional mechanical register which is built up as given in table 5.

Installation conditions:

The meter can operate in the following positions: horizontal flow, vertical flow up and vertical flow down.

Any components which cause severe flow disturbances and could affect the gas flow must be avoided within the extra prescribed inlet pipe length which is 2 DN. The inlet pipe must be designed as a straight pipe section of the same nominal diameter as the gas meter.

For mild flow disturbances there is no prescribed extra inlet pipe length necessary.
