

### **PART 3: TEST REPORT FORMAT FOR TYPE EVALUATION**

#### **INTRODUCTION**

This Report Format applies for any kind of protein measuring instrument for grain (independent of its technology). It presents a standardized format for the results of the various tests and examinations, outlined in Part 2 clause 7 of OIML R xxx (201x), to which a type of protein measuring instrument for grain shall be submitted with a view to its approval based this OIML Recommendation.

It is recommended that all metrology services or laboratories evaluating and/or testing types of protein measuring instrument for grain according to OIML R xxx (201x), or to national or regional regulations based on that Recommendation, use this Report Format, directly or after translation into a language other than English or French. In case of a translation, it is highly recommended to leave the structure and the numbers of the clauses unchanged: in this case most of the contents are also understandable for those who can not read the language of the translation.

It is also recommended that this Report Format in English or in French (or in both languages) be transmitted by the country performing the tests to the relevant authorities of another country, when requested for issuing a national or regional type-approval.

In the practical application of the Report Format, a cover page shall be included by the Issuing Authority, and clauses 1 - 5 shall be included as a minimum.

#### **APPLICABILITY OF THIS TEST REPORT FORMAT**

In the framework of the OIML Certificate System for Measuring Instruments applicable to protein measuring instruments for grain in conformity with OIML R xxx (201x), use of this report format is mandatory, in French and/or in English with translation into the national languages of the countries issuing such certificates, if appropriate.

Implementation of this Report Format is informative with regard to the implementation of OIML Recommendation OIML R xxx (201x) in national regulations.

## GUIDANCE FOR THE APPLICATION OF THIS TEST REPORT

Refer to Part 1 clause 2 of of OIML R xxx (201x) for definitions of terms, acronyms and symbols used.

The measurement unit is not always stated in the header row or column in the table.

The examiner is not expected to include the measurement unit with each recorded measurement result. Percent by weight (abbreviated as ' % w/w' or '%') is the measurement unit applicable for any values of the following:

- Protein content ( $P_{MB}$ )
- MPE, error shift limits, maximum fault, etc.
- Basis moisture content ( $M_B$ ), and
- Actual "as is" moisture content is

The **coloured fields** should always be filled as appropriate.

Where the heading or label of a coloured field indicates "Pass/ fail" or "Pass/ fail/ NA", select the applicable option in the drop-down list that appears when the mouse is placed over the right side of the field.

NOTE: If it is impossible to enter the results in a computer, this Report Form may be printed and completed manually. In this case write "Pass", "fail" or "NA" in the coloured fields as appropriate.

In the Examination Checklist, the optional comments fields have a different colour to the mandatory fields (i.e. fields labelled "Yes/ No", "Pass/ fail" response or details of validation)

The mandatory fields relating to conditions to be specified by the national responsible body (within the limits suggested in OIML R xxx) have a different colour to the fields with the result from the assessment of the submitted type and documentation (i.e. fields labelled "Pass/ fail/ NA"). Select "NA" only when the requirement (or a variant of a requirement) is not adopted by the national responsible body.

In case a prescribed test or requirement is not relevant for the type of instrument to be tested or has not been adopted by the national responsible body, the reason why the test is omitted shall be clearly stated in the field "Comments"

In the test reports, the white fields with blue outline contain calculations and/or conditional formatting to highlight a suspect result.

## THE EVALUATION REPORT

The format for the report is given on the following pages

**To review or revise the formulae for calculated values in the file 20130409 - 4CD Grain Protein Measurement - Part 3 Test Report.xlsx, select Menu Option 'Review' and then select 'Unprotect Sheet'.**

\* Insert Calibration name and version number

#### 4 GENERAL INFORMATION ABOUT THE APPLICATION

##### 4.1 Manufacturer

Name:

Address:

##### 4.2 Applicant

Organisation:

Contact name:

Address:

Email address:

Phone:

Fax:

Application date:

Ref number:

Applicant is authorised by the manufacturer (documented evidence)

Yes/ no

Comments:

### 4.3 Testing laboratories involved in the tests

Complete this form for each test laboratory -

Organisation name:

Address:

Application number:

Tests by this laboratory:

Testing period:  to

Name(s) of test engineer(s):

Laboratory accredited by:

Accreditation number:  Expiry:

Accreditation includes R xxx:  Yes/ no Edition:

Details of relevant peer assessment or assessment by other means:

Details, if any tests have been performed at another location than the laboratory premises:

Responsible person - name:

Date signed:

Signature:

Stamp(s) if applicable:

Comments:

**4.4 General information concerning type**

**4.4.1 Description of the instrument (key technical characteristics and intended applications)**

*e.g. benchtop near infrared (NIR) protein measuring instrument with calibrations for wholegrain wheat and barley*

**4.4.2 Information indicated on the instrument**

Manufacturer trademark:

Year of manufacture:

Type designation:

Model number(s) (if applic):

Electrical power markings:

Software ID (if applic):

Other descriptor/markings:

Comments:

**4.4.3 Information on sample units**

| Serial number | Model number | Manufacture mode<br>(prototype / production) | Year |
|---------------|--------------|----------------------------------------------|------|
|               |              |                                              |      |
|               |              |                                              |      |
|               |              |                                              |      |

Add additional rows if over three sample units are submitted.

Comments:

**4.4.4 Relevant external/internal photographs taken during the examination and tests**

**4.5 Accessories supplied by the applicant**

Batteries (if applicable):      Type        $V_{nom}$        Number required

Data printer (if applic):

External data storage (if applic):

Cables:

Other accesories:

**4.6 Information on sample instruments**

In case the tests and evaluation are valid for more versions, give full details of the ypes, versions, measuring ranges, etc.:

Justification for the selection of the sample unit(s):

**4.7 Adjustments and modifications**

Adjustments, modifications and repairs made to the sample unit(s) during the testing:

**4.8 Results of previous tests that were taken into account**

Details:

**4.9 Additional information concerning type**

**4.9.1 Instrument limitations of use**

|                                    |                                                                  |                                            |                       |
|------------------------------------|------------------------------------------------------------------|--------------------------------------------|-----------------------|
|                                    |                                                                  |                                            | Calibration dependent |
| Sample P <sub>MB</sub> content (%) | Min: <input type="text"/>                                        | Max: <input type="text"/>                  | <input type="text"/>  |
| Sample moisture content (%)        | Min: <input type="text"/>                                        | Max: <input type="text"/>                  | <input type="text"/>  |
| Operating temperature (°C)         | Min: <input type="text"/>                                        | Max: <input type="text"/>                  |                       |
| Grain sample temperature (°C)      | Min: <input type="text"/>                                        | Max: <input type="text"/>                  | <input type="text"/>  |
| Maximum ΔT (°C)                    | <input type="text"/> or ΔT <sub>C,max</sub> <input type="text"/> | & ΔT <sub>H,max</sub> <input type="text"/> | <input type="text"/>  |

If limits are dependent on the grain calibration (i.e. answer is 'Yes') specify values/range in 4.9.2 instead.

Comments:

**4.9.2 Information on the submitted calibrations**

Calibration principle:

| Calibration number | GT1 | GT2 | etc.* |
|--------------------|-----|-----|-------|
| Calibration name:  |     |     |       |
| Version number:    |     |     |       |
| Displayed name:    |     |     |       |
| Date submitted:    |     |     |       |

Calibration limitations of use -

|                                                                  |  |  |  |
|------------------------------------------------------------------|--|--|--|
| Applicable type(s) of grain:                                     |  |  |  |
| P <sub>MB</sub> measuring range:                                 |  |  |  |
| Min/max moisture content:                                        |  |  |  |
| T <sub>C,sample</sub> and T <sub>H,sample</sub> :                |  |  |  |
| ΔT <sub>max</sub> or ΔT <sub>Cmax</sub> and ΔT <sub>Hmax</sub> : |  |  |  |

## 5 EXAMINATION DETAILS

### 5.1 Examination checklist - metrological and technical requirements

(\*) Clause contains requirements to be addressed by the national responsible body.

| Checks on the requirements within R xxx Part 1 |                                                                                                                                                                                                                                                                                                                                                                                                                                | Findings                                                                       |
|------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------|
| <b>3</b>                                       | <b>Units of measurement</b>                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                |
| 3.1                                            | The measurement of the protein content in a grain sample is expressed in percentage by mass (% w/w). The percentage symbol alone (%) is also permitted.                                                                                                                                                                                                                                                                        | Pass/ fail                                                                     |
| 3.2                                            | For each type of grain, the measured protein content is expressed at one basis moisture content ( $M_B$ ). The scaling of the protein content at the actual "as is" moisture content ( $P_M$ ) to the protein content at the basis moisture content ( $P_{MB}$ ) is in accordance with Equation 1.                                                                                                                             | Pass/ fail                                                                     |
| 3.3*                                           | The national responsible body has specified the basis moisture content ( $M_B$ ) for expressing the protein content of each grain type.<br>Examiner to append and/or reference the national specification.                                                                                                                                                                                                                     | Yes/ no                                                                        |
| <b>4</b>                                       | <b>Metrological requirements</b>                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                |
| <b>4.1</b>                                     | <b>Applicable grains and <math>P_{MB}</math> measuring ranges – specification</b>                                                                                                                                                                                                                                                                                                                                              |                                                                                |
| 4.1.1*                                         | The national responsible body has specify commercially important $P_{MB}$ ranges for the grains on which $P_{MB}$ measurements are subject to national approval. R xxx Table 3 contains examples of the types of grains that are commercially important in certain countries/ regions.<br>Examiner to append and/or reference the national specification for the $P_{MB}$ measurement ranges on commercially important grains. | Yes/ no                                                                        |
| 4.1.2                                          | The grain types and the corresponding $P_{MB}$ measuring range that can be analysed by the submitted type of instrument has been declared by the manufacturer.<br>The $P_{MB}$ measuring range includes the range specified by the national responsible body for the grain type.<br>Examiner to append and/or reference the manufacturer's specification.                                                                      | Pass/ fail                                                                     |
| <b>4.2</b>                                     | <b>Instrument environmental operating temperature – specification</b>                                                                                                                                                                                                                                                                                                                                                          |                                                                                |
| 4.2.1(a)*                                      | Examiner to indicate whether a limited range for the environmental operating temperature is permitted.<br>If the answer is 'No' the temperatures applied during type testing should include all the possible environmental temperatures in that particular country.                                                                                                                                                            | Yes/ no                                                                        |
| 4.2.1(b)                                       | The following only applies if the previous answer is 'No'-<br>The submitted type provides accurate $P_{MB}$ measurements in all the environmental temperatures possible in the country/region.<br>Examiner response should be based on the relevant performance test(s).                                                                                                                                                       | Pass/ fail/ NA                                                                 |
| 4.2.2*                                         | The following only applies if the answer to 4.2.1 is 'Yes'-<br>The national responsible body has specified the range of ambient temperatures ( $T_C$ to $T_H$ ) in which the instrument can be used to take $P_{MB}$ measurements for commercial purposes.<br>The temperature range $T_C$ to $T_H$ includes 10 °C to 30 °C. Examiner to append the national specification or indicate the values for $T_C$ and $T_H$ .         | $T_C =$<br>$T_H =$<br>Yes/ no/ NA                                              |

| <b>5.2</b>                                                 | <b>Manufacturer's manual</b>                                                                                                                                                                                                                                                                                                                                                                    |             |
| 5.2.1                                                      | There is a manual to be provided with each protein measuring instrument, that describes the installation, operation, and routine maintenance of the instrument and its accessories.                                                                                                                                                                                                             | Pass/ fail  |
| 5.2.2                                                      | The manual must also include the following information:<br>(a) name and address of the manufacturer;<br>(b) the type of the instrument with which it is intended to be used;<br>(c) date of issue;<br>(d) the types of grain for which the instrument is designed to be used within the scope of national requirements;<br>(e) the limitations of use (refer to OIML R xxx Part 1 for details). | Pass/ fail  |
| 5.2.3(a)*                                                  | The national responsible body has indicated acceptable language(s).<br>Examiner to note the accepted language(s) if 'Yes' or the official language(s).                                                                                                                                                                                                                                          | Yes/ no     |
| 5.2.3(b)                                                   | The user/owner manual is supplied in all the accepted or official language(s) and the translations appear to be accurate.                                                                                                                                                                                                                                                                       | Pass/ fail  |
| <b>5.3</b>                                                 | <b>Markings</b>                                                                                                                                                                                                                                                                                                                                                                                 |             |
| 5.3.1                                                      | Instrument is clearly and permanently marked with the following:<br>(a) manufacturer's name or mark;<br>(b) model designation; and<br>(c) serial number given by the manufacturer.<br>Provision is made for application of a type approval mark.                                                                                                                                                | Pass/ fail  |

| Continued - Checks on the requirements within R xxx Part 1 |                                                                                                                                                                                                                                                                                                                     | Findings       |
|------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| 5.3.2                                                      | Markings are grouped together in a clearly visible location, either on a permanently attached nameplate or on part of the instrument.<br>The required information is readily observable without disassembly.                                                                                                        | Pass/ fail     |
| <b>5.4</b>                                                 | <b>Sample input and calibration selection</b>                                                                                                                                                                                                                                                                       |                |
| 5.4.1                                                      | Provisions in absence of a manufacturer-specified sample temperature range                                                                                                                                                                                                                                          |                |
| 5.4.1.1                                                    | On instruments with different calibrations, the user is able to select the calibration applicable for the sample to be analysed.                                                                                                                                                                                    | Pass/ fail     |
| 5.4.1.2                                                    | The selection of the calibration on the user interface is unambiguous and visible to all parties present, i.e. during the measurement it can be verified that the selected (displayed) calibration corresponds with the sample analysed.                                                                            | Pass/ fail     |
| 5.4.2                                                      | Sampling and minimum sample size                                                                                                                                                                                                                                                                                    |                |
| 5.4.2.1                                                    | The operator shall not be required to judge the precise volume or weight required by the instrument to make an accurate $P_{MB}$ measurement.                                                                                                                                                                       | Pass/ fail     |
| 5.4.2.2 (a)*                                               | Examiner to indicate whether sample smaller than the international recommendation is permitted by the national responsible body.<br>If the answer is 'Yes', examiner to indicate the smallest sample size permitted.                                                                                                | Yes/ no        |
| 5.4.2.2 (b)                                                | The following only applies if the previous answer is 'No'-<br>The size of the sample analysed is no less than 100 g or 400 kernels or seeds which ever is smaller.                                                                                                                                                  | Pass/ fail/ NA |
| 5.4.2.3                                                    | The national responsible body has specified minimum guidelines for the sampling of cereals for testing based on international standards.<br>Examiner to indicate reasons for deviations.                                                                                                                            | Pass/ fail     |
| <b>5.5</b>                                                 | <b>Instrument construction</b>                                                                                                                                                                                                                                                                                      |                |
| 5.5.1                                                      | Nothing observed in the design and construction of the instrument and accessory equipment should make it prone to inaccuracy, malfunction and fraud under normal service conditions.                                                                                                                                | Pass/ fail     |
| 5.5.2                                                      | Day to day forces on the parts of the instruments shall not affect the accuracy of measurements.                                                                                                                                                                                                                    | Pass/ fail     |
| 5.5.3                                                      | The instrument housing protects the main components from dust and moisture.                                                                                                                                                                                                                                         | Pass/ fail     |
| 5.5.4                                                      | The following only applies if the instrument analyses ground/milled samples-<br>The manufacturer of the grain protein measuring instrument has designated the type(s) of mill to be used and included a unit with the submission so its suitability for the measurement process be assessed during type evaluation. | Pass/ fail/ NA |
| <b>5.6</b>                                                 | <b>Level indicating means</b>                                                                                                                                                                                                                                                                                       |                |
| 5.6.1(a)                                                   | The performance of the instrument is changed by an amount greater than the maximum error shift when the instrument is moved from a level position into a position that is out of level in any upright direction by up to 5% (approx. 3°).<br>Examiner response should be based on the relevant performance test.    | Yes/ no        |
| 5.6.1(b)                                                   | The following only applies if the previous answer is 'Yes'-<br>The instrument is equipped with a level indicator and level adjustment means.                                                                                                                                                                        | Pass/ fail/ NA |
| 5.6.2                                                      | The following only applies if the answer to 5.6.1(a) is 'Yes'-<br>The level indicating means is readable without any instrument disassembly.                                                                                                                                                                        | Pass/ fail/ NA |
| <b>5.7</b>                                                 | <b>Presentation of the measured value</b>                                                                                                                                                                                                                                                                           |                |
| 5.7.1                                                      | The instrument is equipped with a digital indicating element which does not display any protein content values before the end of the measurement cycle.                                                                                                                                                             | Pass/ fail     |
| 5.7.2                                                      | Measurement results are displayed as percent protein by mass (%) the $M_B$ .<br>Subdivisions of this unit are in terms of decimal subdivisions (not fractions).                                                                                                                                                     | Pass/ fail     |
| 5.7.3(a)                                                   | The display on the type allows the protein content value to be determined with a resolution of at least 0.1% $P_{MB}$ .                                                                                                                                                                                             | Pass/ fail     |
| 5.7.3(b)                                                   | Units submitted for type evaluation permit 0.01% $P_{MB}$ resolution.                                                                                                                                                                                                                                               | Pass/ fail     |
| 5.7.4(a)                                                   | The type is multi-constituent measuring instrument (e.g. it measures grain moisture content in addition to grain protein content)                                                                                                                                                                                   | Yes/ no        |
| 5.7.4(b)                                                   | The following only applies if the previous answer is 'Yes'-<br>Appropriate labels are displayed or recorded to make it clear which constituent is associated the displayed or recorded measured values.                                                                                                             | Pass/ fail/ NA |
| 5.7.5                                                      | The height for the digits used to display protein content is at least 10 mm.<br>Numbers and symbols of units are presented in accordance with OIML D 2.                                                                                                                                                             | Pass/ fail     |

**5.2 Examination checklist - requirements for software-controlled devices and security**

| Checks on the requirements within R xxx Part 1 |                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                              |                |

General comments on test:

**A fault that exceeds the limit is insignificant if 'acted on' or exempted from the definition of a significant fault.**

**6.3.3 Radiated, radio-frequency, electromagnetic fields [ref. OIML R xxx Annex C clause C.6.3]**

Observer:   
 Type/ application #:   
 Instrument 1 ID:   
 Instrument 2 ID:

| Displayed name | Fault limits |     |     |
|----------------|--------------|-----|-----|
|                | GT           | Min | Max |
|                |              |     |     |

General comments on test:

**Disturbance settings (indicate values if alternative settings are applied)**

Frequency range:  MHz  
 Modulation:   
 Field strength:  V/ m  
 Step size:   
 Rate of sweep:

Frequency range: 26\* - 2000 MHz  
 Modulation: 80% AM, 1 kHz sine wave  
 Field strength: 10 V/ m  
 Step size: 1 %  
 Rate of sweep: 1.5E-03 decade/ s  
 \*Testing from 80 MHz is permitted.

Antenna:   
 Circular polarisation (yes / no):

Note: Two orthogonal polarisations shall be tested if the answer is 'No'.

**Example radiated EMS testing scheme:**

|                       |              |      |       |      |                |      |       |      |
|-----------------------|--------------|------|-------|------|----------------|------|-------|------|
| Antenna polarisation: | 1 - Vertical |      |       |      | 2 - Horizontal |      |       |      |
| Facing EUT side:      | Front        | Left | Right | Back | Front          | Left | Right | Back |

A fault that exceeds the limit is insignificant if 'acted on' or exempted from the definition of a significant fault.

| Instrument | All faults within limits (Yes / no) | All insignificant (Yes / no) | RESULTS SUMMARY (Pass / fail) |                      |                      |
|------------|-------------------------------------|------------------------------|-------------------------------|----------------------|----------------------|

Disturbance settings (Indicate values if alternative settings are applied)

Frequency range:  MHz  
 Modulation:   
 RF amplitude (50 Ω):  V (e.m.f.)

Frequency range: 0.15 - 80 MHz  
 Modulation: 80% AM, 1 kHz sine wave  
 RF amplitude (50 Ω): 10 V (e.m.f.)

\*Use another sample/ batch for other instrument if 1st sample unfit due to overuse.

General comments on test:

**A fault that exceeds the limit is insignificant if 'acted on' or exempted from the definition of a significant fault.**

| Instrument | All faults within limits (Yes / no) | All insignificant (Yes / no) | RESULTS SUMMARY (Pass / fail) |            |      |
|------------|-------------------------------------|------------------------------|-------------------------------|------------|------|

Direct discharge mode (contact, paint penetration or air)

2 kV   
 4 kV   
 6 kV   
 8 kV

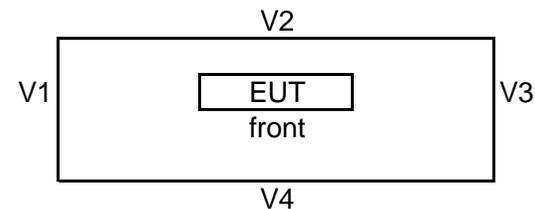

**It is permitted to only test one at polarity.**  
**IEC 61000-4-2 specifies to select the most sensitive polarity.**

Polarity of indirect discharges (positive / negative):
